

# Go application hosting in Canada: planning checklist

Deploy your Go service on a Linux VPS. Configure its process, public endpoint, logs and persistent data.

## What to check

### Runtime and processes

Check Go services that can ship as a compact binary but still need process supervision, TLS or reverse proxying, logs, firewall rules, configuration, and recovery.

### Data to protect

Identify databases, uploads, volumes, configuration and secrets that cannot be rebuilt from the application code. Back them up and test a restore.

### Network access

List the ports that must be public and those that should remain private. Configure authentication, TLS and firewall rules before accepting traffic.

### Deployment and maintenance

Check how the service starts after a reboot, where logs are stored and who applies updates. Test a deployment and rollback without changing live customer data.

## Before you proceed

Confirm the current product specifications and service responsibilities. Record who can approve a change and how to recover the service if it goes wrong.

# Services to compare

Check the linked product pages for current prices, included resources, availability and terms.

## Web hosting

Shared hosting for websites and email, with Virtualmin included. Check the current plan limits and optional software charges.

## Migration help

Get help planning a supported move. Agree on scope, tests, cutover timing and rollback before switching live traffic.

## Domains

Register, transfer or renew a domain and manage DNS. Check extension-specific eligibility, transfer rules and renewal prices.

## Ask about your project

Send the software, capacity, location and timing requirements. Confirm any feature not shown on the current product page before ordering.

# Your project notes

Keep this page with your project. Do not write passwords, private keys or other secrets here.

|                                            |  |
|--------------------------------------------|--|
| <b>Project / website</b>                   |  |
| <b>Software and data</b>                   |  |
| <b>Service / full ongoing cost</b>         |  |
| <b>Account owner / administrator</b>       |  |
| <b>Backup location / restore test</b>      |  |
| <b>Move or launch date / rollback plan</b> |  |

Software and data: Which application, files, databases and integrations are included?

People and timing: Who owns the service, who maintains it, and when must the work be finished?

Budget and recovery: What is the full ongoing cost, and how will you recover if the change fails?

## Ready for the next step?
